snapC	Custom Length Snap Brace	

TOWER LIFTING LADDER

The Tower Lifting Ladder is available for 12", 16" and 20.5" towers and is designed to raise and lower GS Towers utilizing a one ton chain hoist (not included with ladder). The lifting ladder is bolted to the tower sleeve block, the hoist is rigged to the lifting point and the chain is positioned over the ladder pulley, then passed over the tower head block wheels and attached to the tower truss. When power and control signals are sent to the motor, the tower will rise; when the tower reaches vertical, lock the hinge.
